

Research Poster

Task Description - Overview:

The final step of the Scientific Research Method is to publish your research. This can be done in several ways, but in this course, you will create a **Research Poster**.

Instructions:

Create a Research Poster that displays and reports the research you have conducted. It must contain the following sections/elements:

1. Title
2. Student names and IDs
3. Abstract
4. Introduction
5. Methods
6. Results (including 3 charts of selected data from your Form)
7. Discussion
8. Conclusion/Recommendations
9. References
10. Appendix (optional)

Note: you may use content that you have already created this semester.

Section specifications:

Abstract: a concise summary of the research; 3 or 4 sentences outlining the research question/aims, methods and conclusions.

Introduction: an introduction to the topic, your research question and your hypothesis (you may add a few sentences summarizing your background research).

Methods: a description of how the primary research was conducted, the methods and data collection tool used. A survey [method table](#) can be included, and survey questions can be included through a link in the Appendix.

Method table

Instructions for the students:

Please fill out the below table below and include it in the Methods section of your poster.
